

1    **Abstract of Disclosure**

2    A valve is provided for a blowtorch. The valve includes a housing, a  
3    switching device and an adjusting device. The housing is connected  
4    between a reservoir and a nozzle of the blowtorch. The switching  
5    device is provided for switching the valve between a communicating  
6    mode and a blocking mode. The adjusting device is provided for  
7    adjusting the flow rate of the gas through the valve.
